

BioVapor Portable Electric Heat Unit

BioVapor has developed and deployed a portable electric heat unit.

Our unique heat technology has now become smaller and more portable due to the latest product development. This new BioVapor is very portable and significantly quieter than previous models. This unit is optimised for longer treatment times and can be run continuously and remotely monitored through BioVapor's wireless monitoring and data logger technology. For more information on this latest development, please contact BioVapor at info@biovapor.com.
